

ENGLISH

This section contains 22 questions.

The time allotted is 20 minutes.

The following section contains three types of questions: Sentence Completion, Restatement and Reading Comprehension. Each question is followed by four possible responses. Choose the response which best answers the question and mark its number in the appropriate place on the answer sheet.

Sentence Completions (Questions 1-8)

This part consists of sentences with a word or words missing in each. For each question, choose the answer which best completes the sentence.

- The natural _____ known as a von Kármán vortex is named for the physicist who first described it.
 - persuasion
 - coincidence
 - phenomenon
 - remedy
- A woodchuck _____ breathes almost 1,000 times per hour, but while hibernating, it breathes only 10 times per hour.
 - consequently
 - ordinarily
 - obviously
 - fortunately
- Blueberries are rich in antioxidants, which can prevent _____ of the body's cells and promote good health.
 - negotiation
 - deterioration
 - contemplation
 - supervision
- Sarah Orne Jewett's works were once _____ as having little literary merit.
 - unified
 - prioritized
 - dismissed
 - liberated

5. In his *Nicomachean Ethics*, Aristotle _____ philosophical questions such as "Where does happiness lie?"

- (1) hauls
- (2) ponders
- (3) starves
- (4) blunders

6. The Satchmo Summerfest, held each year in New Orleans, celebrates the _____ legacy of the illustrious jazz musician Louis Armstrong.

- (1) convincing
- (2) retiring
- (3) indulging
- (4) enduring

7. Since 2021, Myanmar's government has been _____ in a civil war against insurgent groups.

- (1) enchanted
- (2) embroiled
- (3) dejected
- (4) distorted

8. Mozart's opera *The Marriage of Figaro* _____ a castle near Seville, Spain, in the late 18th century.

- (1) which takes place in
- (2) sets in
- (3) have taken the place of
- (4) is set in

Restatements (Questions 9-12)
This part consists of several sentences, each followed by four possible ways of restating the main idea of that sentence in different words. For each question, choose the one restatement which best expresses the meaning of the original sentence.

9. Actress Lotte Lenya's rare film roles included her portrayal of Rosa Klebb in *From Russia with Love*.

- (1) Lotte Lenya was outstanding as Rosa Klebb in the film *From Russia with Love*.
- (2) *From Russia with Love* was the movie that established Lotte Lenya's reputation as a serious actress.
- (3) Lotte Lenya played Rosa Klebb in *From Russia with Love*, one of the few movies in which the actress appeared.
- (4) The role of Lotte Lenya in *From Russia with Love* was played by Rosa Klebb.

10. Although the punctuation mark ending a sentence was referred to as a "period" in the Shakespearean era, that word eventually fell out of favour in England and was replaced by "full stop".

- (1) Shakespeare preferred the phrase "full stop" to the word "period", though the latter was more commonly used in his day.
- (2) At some point after Shakespeare's day, the English stopped referring to the punctuation mark at the end of a sentence as a period, preferring instead to call it a full stop.
- (3) Today, a period is used to indicate a full stop at the end of a sentence, but in Shakespeare's England, it had a different purpose.
- (4) The punctuation marks Shakespeare used to indicate the end of a sentence were later abandoned by the English in favour of the period, or full stop.

11. The royal palace in Ugarit was one of the most imposing edifices in all of western Asia, rivaled only by the royal palace in Tyre.

- (1) The royal palace in Ugarit, the largest in western Asia, was modeled after the royal palace in Tyre.
- (2) No other buildings in western Asia were as magnificent as the royal palaces in Tyre and Ugarit.
- (3) The rulers of western Asia held court at the impressive palaces of Ugarit and Tyre.
- (4) Ugarit and Tyre, both prosperous centers in western Asia, were home to an array of royal palaces.

12. Ibn Khaldun, one of the leading Arab scholars of the 14th century, advanced economic theories that anticipated the work of much later thinkers.

- (1) Ibn Khaldun's innovative economic theories were not shared by other scholars of his time.
- (2) Ibn Khaldun's contributions to the field of economics were unparalleled.
- (3) Ibn Khaldun formulated economic theories that are still relevant today.
- (4) Ibn Khaldun put forth theories of economics that were far ahead of his time.

הבנה Reading Comprehension

This part consists of two passages, each followed by several related questions. For each question, choose the most appropriate answer based on the text.

שאלה Text I (Questions 13-17)

- (1) The Religious Society of Friends, commonly known as the Quakers, is a religious community that was founded in England in the mid-seventeenth century. Some hundred years later, a group called the Wardley Society broke away from the community and moved to the New World – America – in search of religious freedom. The group earned the name "Shaking Quakers", or simply Shakers, because their worship included trembling, dancing, jumping up and down, and shaking all over.

- (10) The Shakers believed that they served God by approaching all tasks, even mundane ones, with painstaking care. This attitude gave rise to a distinctive style of architecture, furniture, and decorative arts. The Shaker style, with its clean lines and lack of ornamentation, reflects the traditional Shaker values of simplicity, utility, and superior craftsmanship. Although the Shakers were never a large community, they had a considerable influence on American aesthetics. They pioneered the principles of form and function that were later advocated by such notable architects and designers as John Ruskin and Louis Sullivan.

- (15) The Shakers also embraced technology, believing that labor-saving devices would give them more time for study and prayer. An astonishing variety of inventions that have become part of the American lifestyle can be attributed to them. These include the flat-edged broom, the motorized washing machine, the pea sheller, and the revolving oven.

- (20) During the 1800s, Shaker communities dotted the farmlands of the United States from Maine in the north to Florida in the south. At their peak, the Shakers numbered 6,000 members in 14 communities. However, because Shakers do not marry or have children, most of their settlements have disappeared or been made into museums. There is only one remaining place – New Gloucester, Maine – where the old ways are still practiced by the last eight Shakers in the world.

שאלה

Questions

13. The **main purpose** of the text is to -

- (1) **describe** the **history** and **characteristics** of the **Shaker community**
- (2) **discuss** the **most famous Shaker inventions**
- (3) **compare** the **Shaker and Quaker religions**
- (4) **explain Shaker beliefs and forms of worship**

14. According to the first **paragraph**, the **Shakers** got their name **from** the **fact** that they -

- (1) **shook** **while** they prayed
- (2) **wanted** to become **Quakers**
- (3) **moved** to the **New World** in search of **religious freedom**
- (4) **formed** a **community** of their **own**

15. According to the second **paragraph**, the **Shakers'** distinctive style was a **result of** their -

- (1) **desire** to make their **community** **different** from **others**
- (2) **belief** that **doing** everyday things **well** was a **way of serving God**
- (3) **desire** to **improve** their living **conditions**
- (4) inability to buy **what** they **needed** from **other people**

16. According to the second **paragraph**, **Shaker** furniture is -

- (1) **difficult** to **find** today
- (2) **influenced** by the **work** of **Ruskin and Sullivan**
- (3) **extensive** and **highly ornamented**
- (4) **simple** and **useful**

17. According to the **last paragraph**, there are very **few** **Shakers** today **because** -

- (1) **Shakers** do **not** have **children**
- (2) the **Shaker way of life** is **very difficult**
- (3) the **Shakers** **could not adapt** to the **modern world**
- (4) **Shaker communities** were **too far away** from **one another**

שאלה
Text II (Questions 18-22)

- (1) Few creatures in the sea sport an odder appendage than the remora, which has an elongated suction mechanism on top of its head. Remoras, tropical fish ranging in length from 30 to 110 centimeters, are the hitchhikers of the sea. They catch rides by affixing their suction disc to other creatures that can be up to twenty times their size, such as sharks and sea turtles. They have even been known to attach themselves to boats. This is reflected in the fish's scientific name: Echineidae comes from Echeneis, which is made up of two Greek words, *echēin* (to hold) and *naus* (ship).

- (10) David Johnson of the Smithsonian National Museum of Natural History describes the remora's suction disc as "one of the most remarkable and most highly modified skeletal structures among vertebrates". Within the disc are paired rows of flexible membranes, called lamellae, which are laid out like ribs. The flexibility of the lamellae allows the remora's suction disc to mold to the uneven surface of another fish's body, thereby creating a tight seal.

- (15) The relationship between the remora and the living organisms it attaches itself to is a symbiotic one. There are three kinds of symbiosis: commensalism, in which one organism benefits and the other is neither harmed nor helped; parasitism, in which one side benefits at the expense of the other; and mutualism, in which both sides benefit. Scientists disagree about the nature of the relationship between the remora and its hosts. The remora clearly benefits from free transportation, and its proximity to a larger animal protects it from predators and provides it with a steady supply of food from the host's leftover scraps. But what about the host? Some researchers claim that a passenger slows down the host's movement and increases its energy expenditure. Others maintain that remoras are so much smaller than their hosts and so streamlined that the effect of their presence is negligible. Do the hosts benefit in some way? Some suggest that remoras eat small crustaceans that have become embedded in their hosts. The counterargument, however, is that it is more likely that crustaceans fall off on their own. If so, remoras would not be paying for the services rendered.

- (30) Fishermen around the world benefit from the remora. After they tie a line to its tail and release it into the water, the remora swims off and attaches itself to a large fish or sea turtle, enabling the fisherman to carefully reel in the catch. So how do fishermen obtain their remora? They either get lucky and catch a fish with a remora attached or they catch very young remoras in nets along with other fish and keep them until they are old enough to be sent out to latch on to other fish.

שאלה

Questions

18. According to the second paragraph, lamellae -

- (1) have multiple functions
- (2) are paired rows of ribs
- (3) are equipped with suction discs
- (4) enable the remora to latch on to its host

19. The main purpose of the third paragraph is to -

- (1) present different interpretations of the relationship between remoras and their hosts
- (2) discuss the disagreement among scientists about the benefits remoras derive from symbiosis
- (3) discuss the advantages and disadvantages of being a host
- (4) compare commensalism, parasitism, and mutualism

20. In lines 21-22, "a passenger slows down the host's movement and increases its energy expenditure" is an argument that the relationship is -

- (1) commensal
- (2) parasitic
- (3) mutualistic
- (4) none of the above

21. In line 32, "them" refers to -

- (1) remoras
- (2) other fish
- (3) fishermen
- (4) nets

22. Which of the following does not refer to the remora's appendage?

- (1) elongated mechanism
- (2) suction disc
- (3) a highly modified skeletal structure
- (4) uneven surface
